1. What is WorkFlow360?

WorkFlow360 is a business management web application for a service company. In one place a team can manage **sales leads and clients, projects and tasks, employees, attendance and leave, quotations, invoices, payments and expenses, documents, support tickets, meetings, notifications**, and see **dashboards and reports**. Clients get their own portal to follow projects, download invoices and raise tickets.

The three workspaces

Workspace	Who uses it	What it is for
Admin panel (/admin)	Company admin (and super admin)	Run the whole company: CRM, projects, people, finance, documents, support, reports, team and settings.
Employee panel (/employee)	Employees and managers	Daily work: my projects and tasks, calendar, meetings, attendance, leave, documents, activity.
Client portal (/client)	Customers of the company	See their projects and progress, invoices and payments, documents, meetings, messages and support tickets.

Each workspace has its own colour theme so you always know where you are: **teal** for admin, **orchid** for employee and **orange** for the client portal.

How the pieces fit together

Piece	Technology	Where it runs
Web app (screens you click)	React, Vite, Tailwind	http://localhost:5173
Backend API (business rules, security)	Python + FastAPI	http://localhost:8000 (docs at /docs)
Database	MySQL / MariaDB in XAMPP	localhost:3306, database workflow360_db

The web app talks to the backend over a REST API at **/api/v1**. The backend checks who you are (login token), what your role may do (permissions), and which company's data you may see, then reads or writes MySQL.

IMPORTANT: Right now the web app runs on **built-in sample (mock) data** for every screen except login/register, which can use the real backend. Sample data lives in the browser memory and resets when you refresh the page. The real backend already has all the functions and its own demo data; connecting the remaining screens to it is the next development step.

2. Getting started

Step 1 - Start MySQL

1. Open the **XAMPP Control Panel**.
2. Click **Start** next to **MySQL**. The label turns green. (Start **Apache** too only if you want phpMyAdmin.)

Step 2 - Start the backend (Terminal 1)

1. Open PowerShell and go to the backend folder: `cd D:\Rosh-websites\WorkFlow360\backend`
2. Activate the Python environment: `..\venv\Scripts\Activate.ps1`
3. Start the server: `uvicorn app.main:app --reload --port 8000`
4. Open `http://localhost:8000/docs` in the browser. If you see the Swagger page, the backend works.

Step 3 - Start the web app (Terminal 2)

1. Open a second PowerShell: `cd D:\Rosh-websites\WorkFlow360`
2. First time only: `npm install`
3. Start it: `npm run dev`, then open `http://localhost:5173`.

Optional - use the real backend for login

Create a file named `.env.local` in `D:\Rosh-websites\WorkFlow360` containing one line:

`VITE_API_URL=http://localhost:8000/api/v1` and restart `npm run dev`. Login, register, forgot/reset password and logout then use the real API and database. Remove the line to go back to sample data.

All login IDs and passwords are listed on the next page (section 2A).

2A. All login IDs and passwords (every dashboard)

IMPORTANT: These accounts are for **local practice only**. Never use these passwords on a real server.

There are two independent sets of accounts. Use **Set 1** when you open the website normally (it runs on built-in sample data). Use **Set 2** for the real database - through Swagger (<http://localhost:8000/docs>) or on the website after you add `VITE_API_URL=http://localhost:8000/api/v1` to `.env.local`.

Set 1 - Website demo accounts (sample data)

Password for every account in this set: `password123`. Login page: <http://localhost:5173/login> (the Admin / Manager / Employee / Client buttons fill these in for you).

Dashboard	Login ID (email)	Password	Name and role
Admin panel /admin	jidnyasa.girase@technova.in	password123	Jidnyasa Girase - Company Admin, founder and CEO (TechNova Solutions)
Employee panel /employee (manager view)	jay.girase@technova.in	password123	Jay Girase - Manager, project manager
Employee panel /employee	rohit.girase@technova.in	password123	Rohit Girase - Employee, senior frontend developer
Employee panel /employee	sneha.joshi@technova.in	password123	Sneha Joshi - Employee, UI/UX designer
Client portal /client	aditi@brightpixel.in	password123	Aditi Rao - Client, marketing head (BrightPixel Labs)

There is no Super Admin login in Set 1.

Set 2 - Real database accounts (backend)

Password for every account in this set: `Password@123` (capital P, at sign, digits). These are created by `python -m app.database.seed --reset`.

Dashboard	Login ID (email)	Password	Name and role
Admin panel /admin	admin@workflow360.local	Password@123	Super Admin - sees every company
Admin panel /admin	company@workflow360.local	Password@123	Jidnyasa Girase - Company Admin (TechNova Solutions)
Employee panel (manager view)	manager@workflow360.local	Password@123	Jay Girase - Manager (Delivery)
Employee panel	employee@workflow360.local	Password@123	Rohit Girase - Employee (Development)
Client portal /client	client@workflow360.local	Password@123	Aditi Rao - Client user of BrightPixel Labs

More accounts in Set 2 (same password: Password@123)

Dashboard	Login ID (email)	Password	Name and role
Employee panel	sneha.joshi@workflow360.local	Password@123	Sneha Joshi - Employee (Design)
Employee panel	amit.kulkarni@workflow360.local	Password@123	Amit Kulkarni - Employee (Development)
Employee panel	tanvi.deshpande@workflow360.local	Password@123	Tanvi Deshpande - Employee (QA)
Employee panel	karthik.reddy@workflow360.local	Password@123	Karthik Reddy - Employee (Development)
Employee panel	pooja.nair@workflow360.local	Password@123	Pooja Nair - Employee (HR)
Employee panel	ishaan.verma@workflow360.local	Password@123	Ishaan Verma - Employee (Sales)
Employee panel	meera.ier@workflow360.local	Password@123	Meera Iyer - Employee (Finance)
Employee panel	rohan.gupta@workflow360.local	Password@123	Rohan Gupta - Employee (Support)
Client portal	karan.mehta@workflow360.local	Password@123	Karan Mehta - Client user of CloudMatrix Technologies
Admin panel (2nd company)	admin@northwind.local	Password@123	Nora Wind - Company Admin of Northwind Digital (used to check that companies cannot see each other's data)

Where each login lands

Role	Opens	Can also open
Super Admin, Company Admin	/admin/dashboard	Employee panel by address
Manager	/employee/dashboard	Admin panel by address (the menu does not link to it)
Employee	/employee/dashboard	Nothing else - admin addresses show Access Denied
Client	/client/dashboard	Nothing else

Quick test

1. Open <http://localhost:5173/login>.
2. Type a Login ID and Password from the tables above (Set 1 for the normal website).
3. Click **Log In** - you land on the dashboard listed above.
4. To try another role: use the avatar menu (top right) > **Log Out**, then log in again.

3. Roles and what each can do

Every user has exactly one role. The role decides which workspace opens after login and which functions are allowed. In addition, users only ever see data of **their own company**; a record of another company simply does not exist for them.

Area	Super admin	Company admin	Manager	Employee	Client
Scope	All companies	Own company	Own company	Own company	Own client record
Users and roles	Manage all	Manage users	View users	-	-
Employees	All	All incl. salary	Directory, no salary	Directory, no salary	-
Clients and leads	All	All	View, create, edit	-	Own record only
Projects	All	All	Ones they manage / belong to	Ones they belong to	Their own projects (budget hidden)
Tasks	All	All	Their projects' tasks	Own tasks (update status, comment)	-
Invoices, payments	All	All	View only	-	Own issued invoices and payments
Expenses, quotations	All	All	View only	-	-
Documents	By visibility	All in company	By visibility	By visibility	Documents shared with their client
Support tickets	All	All	All in company	Assigned / created by them	Own client's; internal notes hidden
Attendance and leave	All	All, approve	View, approve leave	Own; apply for leave	-
Reports	All	All	Projects, tasks, tickets, employees	-	-
Audit log, settings	All	Own company	-	-	-

TIP: The exact permission list for every role is stored in the database (**role_permissions**) and can be changed only by a super admin.

4. Public website and signing in

Public website (no login needed)

The public site is the marketing face of WorkFlow360. The header has Features, Solutions, Pricing, About and a **Resources** menu (FAQ, Contact, Privacy Policy, Terms), a theme toggle, and **Login / Get Started** buttons (a **Dashboard** button replaces them when you are signed in). On phones the header becomes a slide-in menu.

Page	What it contains	What you can do
Home /	Hero with animated dashboard preview, statistics, six module cards, lifecycle workflow, security, plan cards, testimonials, FAQ and call to action	Start Free (register), Explore Features, jump to Pricing / FAQ, Talk to Sales
Features /features	Six modules (CRM & Leads, Project Management, Employee Management, Billing & Invoicing, Client Portal, Support Desk) plus extras: Meetings & Calendar, Documents, Reports, Global Search (Ctrl+K), Notification Center, Role-Based Access	Start Free, See Pricing
Solutions /solutions	Five audiences: Software & IT, Digital Agencies, Consulting Firms, Startups, SMBs	Talk to Sales
Pricing /pricing	Starter (Rs 1,999/month, Rs 1,599 yearly, 5 members, 10 clients), Business (Rs 4,999 / Rs 3,999, 25 members, client portal, attendance, tickets), Enterprise (custom). Yearly saves 20%; prices exclude 18% GST	Monthly/Yearly toggle, comparison table, pricing FAQ, Start Free Trial, Contact Sales
About /about	Values, team, statistics, 2023-2026 story	Start Free, Contact Us
Contact /contact	Address, phone, hours (Mon-Sat 10-7 IST) and a message form	Send a message (see below)
FAQ /faq	Eight questions in an accordion	Search questions; Contact Us
Privacy / Terms	Legal text with a table of contents (updated 1 September 2026)	Jump between sections

Contact form

1. Open **Contact**.
2. Fill Full Name* (2+ characters), Email*, Phone* (Indian mobile: optional +91, then 10 digits starting 6-9), Company (optional), Subject*, Message* (10-1000 characters, live counter).
3. Click **Send Message**. A 'Message sent' panel appears. In this version nothing is actually e-mailed.

Special pages

- **Access Denied** (/access-denied): shown when your role may not open an area. **Session Expired** (/session-expired): shown when your login times out - click **Log in again**.
- **Network Error** (/network-error): shows whether you are online, with **Try again**. **404**: any unknown address; **Go Dashboard** takes you to the dashboard of your role (or Login).

Login

1. Open **/login**.
2. Enter Email* and Password* (use the eye icon to show it). **Remember me** stores only your e-mail for next time.
3. Click **Log In**. A welcome message appears and you are sent to your workspace. A wrong e-mail or password shows 'Invalid email or password'.
4. **Demo quick-fill buttons** (Admin, Manager, Employee, Client) fill in a demo account for you.

Role	Opens	Notes
Client	/client/dashboard	Client portal only
Employee, Manager	/employee/dashboard	A manager may also open admin URLs directly, but the menu does not link there
Company admin, Super admin	/admin/dashboard	Admins may also open employee URLs

If you were sent to Login from a protected page you return to it only if your role may open it. Not signed in gives Login (or Session Expired if the login timed out); the wrong role gives Access Denied. Your login lasts **8 hours** from sign-in.

Register, forgot password, reset password, verify e-mail

- **Register** (</register>): choose **Company** (creates a company workspace and its admin), **Employee** or **Client**; Full Name*, Email*, Phone* (10-digit Indian mobile), Company Name (company only), Password and Confirm Password, and tick the Terms box. Password: at least 8 characters, and at least 3 of: upper case, lower case, number, symbol (a strength meter shows progress). With the **real backend** only Company accounts can self-register - employees and clients are created by the admin.
- **Forgot password** (</forgot-password>): enter your e-mail and click **Send Reset Link**; the link is valid 30 minutes and **Resend** unlocks after 30 seconds. (No real e-mail is sent yet.)
- **Reset password** (</reset-password?token=...>): New Password and Confirm New Password with the same rules; then **Continue to login**.
- **Verify e-mail** (</verify-email>): **Resend Verification Email** (30-second wait) or, in the demo, **Simulate clicking the email link**; opening the page with [?token=](#) verifies straight away.

5. Admin panel (company admin)

The admin panel (`/admin`) is for the company admin, super admin and managers who need the full picture. Everything below is described from the actual screens.

Layout: sidebar and top bar

Sidebar (left)

- **Workspace switcher** under the logo: lists TechNova Solutions, BrightPixel Labs, CloudMatrix. In this version it only shows a message and changes the label.
- **Menu groups:** Dashboard | CRM (Leads, Clients, Contacts, Activities, Meetings) | Projects (All Projects, Tasks, Milestones) | People (Employees, Departments, Attendance, Leave) | Finance (Quotations, Invoices, Payments, Expenses) | Operations (Documents, Support, Calendar) | Reports, Notifications, Team & Roles, Settings.
- The current page is highlighted. Your name card is at the bottom. **Collapse/Expand** (desktop) shrinks the sidebar to icons.
- On phones and tablets (below 1024 px) the sidebar is a slide-in drawer opened with the hamburger icon; close it with X, Esc, a tap outside, or by choosing a page.

Top bar

- **Breadcrumb** shows where you are.
- **Search** (or press **Ctrl+K**): searches leads, clients, projects, employees, tasks, invoices and tickets (up to 8 results). Use Up/Down and Enter, Esc to close.
- **Create** button (Quick Create): New Lead, Client, Project, Task, Invoice, Meeting, Ticket, Employee - each opens that page with its form already open.
- **Help** icon opens the FAQ. **Bell** shows unread notifications (Mark all as read / View all). **Moon/sun** switches light and dark mode.
- **Avatar menu:** Profile, Settings, Appearance, Help & Support, **Log Out**.

5.1 Dashboard

Purpose: A read-only overview of revenue, work and support status.

What you see

- **Welcome banner** with a greeting, today's date and total revenue.
- **Quick actions** (7 tiles): New Lead, New Project, Create Invoice, Add Task, Schedule Meeting, Log Ticket, Add Client.
- **6 KPI cards** with value, change versus last month and a sparkline: Total Revenue, Outstanding Invoices, Active Clients, Active Projects, Pending Tasks, Open Tickets.
- **Charts:** Revenue (monthly area), Project Status (donut), Task Overview (bars by stage), Client Growth (line), Support Tickets (opened vs resolved), Employee Workload (open tasks per person).
- **Lists:** Upcoming Meetings (next 4), Team Snapshot (top 5 by open tasks; amber badge at 4 or more), Recent Activity timeline.

What you can do

- Click a quick-action tile or the header **New Project** button to open the create form on the target page.
- Hover charts for exact values. Use **View all** links to go to Meetings, Employees or Notifications.
- If loading fails, an error message with **Retry** appears.

5.2 CRM: leads, clients, contacts, activities

Leads (Leads page)

Purpose: Track sales leads through the pipeline and convert them into clients.

What you see

- **Table view** (5 rows per page): Lead, Company, Email, Phone, Source, Status, Owner, Last Contact, Next Follow-up. A past follow-up on an open lead is red with '(overdue)'.
- **Pipeline (Kanban) view:** columns New, Contacted, Qualified, Proposal, Negotiation, Won, Lost; cards show priority and value.

What you can do

- **Search** by name, company, email or phone. **Filters:** status, source, owner, last-contact date range (shown as removable chips, plus Clear all).
- **Export** the filtered list to CSV. **Add Lead** opens the form.
- Row actions: View, Edit, **Convert to Client** (or View Client once converted), Delete (asks to confirm).
- **Bulk actions:** tick rows, then Change status, Assign owner, Export or Delete.
- In the pipeline, **drag a card** to another column (or use the card's move button) to change its status.

How to: add a lead

1. Click **Add Lead**.
2. Fill Contact Name*, Company*, Email*, Estimated Value* (Rs., above 0) and Owner*; optionally phone, source, status, priority, next follow-up and notes.
3. Click **Add Lead**. Last Contact is set to today and any note becomes the first note.

How to: convert a lead to a client

1. Open the row menu and choose **Convert to client**, then confirm.
2. A client is created from the lead, the lead becomes **Won**, and the new client page opens.

Good to know

- Phone is optional but needs 10-13 digits; email must be valid. Won and Lost leads are never flagged overdue.

Lead details

Purpose: One lead in full: information, notes, activities, follow-ups and a timeline.

What you see

- Header with company, status, priority, value, follow-up and owner; a **stage strip**; Lead Information, Notes, Activities, Follow-ups & Meetings and a combined **Timeline**.

What you can do

- **Click a stage** in the strip to change the status (logged in the timeline). **Reassign** the owner. **Edit** or **Convert to Client**.
- **Add Note** (up to 500 characters, cannot be empty).
- **Add Activity:** Type (Call, Email, Meeting, Note, Follow-up), Owner, Subject (5+ characters), Date, Time, Notes. A Follow-up sets the lead's next follow-up; Call/Email/Meeting update Last Contact.
- **Schedule Meeting:** Title, Date (not in the past), Time, Type (Video Call, In Person, Phone Call), Host, optional link (http/https), Agenda.
- **Mark done** on the follow-up row clears it and sets Last Contact to today.

Clients (Clients page)

Purpose: The list of client companies.

What you see

- Table: Company (industry, city), Contact Person, Email, Phone, Projects (total and active), Revenue, Status, Last Activity. Sortable columns.

What you can do

- Search by company, contact, email, phone or city; filter by status and industry; export CSV; **Add Client**.
- Row actions: View, Edit, Delete (confirm). Bulk: Mark Active, Mark Inactive, Export, Delete.
- Client form: Company Name*, Industry, Contact Person*, Email*, Phone, City, Status (Active/Inactive).

Client details

Purpose: Everything about one client.

What you see

- Banner and 4 KPI cards: Total Revenue, Outstanding, Active Projects, Client Since.
- Tabs (with counts): **Overview**, Projects, Contacts, Documents, Invoices, Payments, Tickets, Meetings, Activity. Side panel shows the Primary Contact.

What you can do

- **Edit Client**, **Schedule Meeting** (client is attached automatically), **Add Contact**, **Add Activity** (also updates Last Activity).
- Links open the related project, invoice or ticket.

Contacts

Purpose: A directory of everyone tied to leads and clients.

What you see

- Table: Contact (name, designation), Company, Email/Phone, Type badge (Client Contact / Lead Contact).

What you can do

- Search; filter All / Client contacts / Lead contacts; click a client contact to open its client.
- **Add Contact**: Full name*, Designation, Linked client (optional - fills and locks Company), Company*, Email*, Phone. No linked client means a Lead contact.
- There is no edit, delete or export on this page.

Activities

Purpose: A log of every call, email, meeting, note and follow-up.

What you see

- Table (8 per page) or a **Timeline** (toggle), newest first: Type, Activity, Related to (Lead/Client badge), Owner, Date, Outcome.

What you can do

- Search; filter by Type and Owner; **Log activity**: Type*, Owner*, Subject* (5+ characters), Related lead or client*, Date*, Time*, Notes.
- The outcome is set automatically (Call = Connected, Email = Sent, Meeting = Completed, Note = Logged, Follow-up = Pending). No edit or delete.

5.3 Meetings and Calendar

Meetings

Purpose: Schedule and follow client, project and internal meetings.

What you see

- Tabs with counts: **List**, **Calendar** (month grid), **Upcoming**, **Completed**. Cards show title, status (Scheduled/Completed/Cancelled), client, project, date, time, type, participants and a Join link.

What you can do

- Search by title, client, project or participant; filter by Type and Client.
- **Schedule Meeting:** Title*, Client*, Project (only that client's projects), Date*, Time*, Type (Video Call, Phone Call, In Person), meeting link (Video only; blank auto-creates one), Participants* (at least one; team and client contacts), Notes.
- Click a card or calendar item for the **details drawer**: copy the link, **Join meeting** (scheduled video calls), change status (Cancelled asks to confirm), edit and **Save notes**.
- In the Calendar tab click a day to see that day's agenda.

Company Calendar

Purpose: One calendar combining meetings, task due dates, project deadlines and lead follow-ups.

What you see

- Type buttons with counts (click to hide/show a type), Month or Week grid, a right panel with the selected day's events and a legend.

What you can do

- Month/Week toggle, Today, previous/next. **Schedule meeting** (Title, Date, Time, Type, Participants).
- Events on the calendar are view-only. A meeting created here is kept only on this page and is lost on refresh in this version.

5.4 Projects, tasks and milestones

Projects

Purpose: See and manage all projects.

What you see

- **Card view** (progress ring, status, team avatars, deadline) or **Table view** (Project, Client, Manager, Progress bar, Deadline, Team, Status). A late deadline is red.

What you can do

- Search by project, client or manager; filter by Status (Planning, Active, On Hold, Completed, Cancelled), Client and Manager.
- **New Project:** Name* (3+ characters), Client*, Project Manager*, Status, Budget* (above 0), Start Date, Deadline* (not before start), Team Members, Description.
- Row actions: View, Edit, Delete (confirm). New projects start at 0% progress.

Project details

Purpose: The full view of one project.

What you see

- Header with status, an 'Overdue by N days' flag, client, manager, progress and deadline.
- **Overview** tab: 8 KPI cards (progress, budget, spent, remaining - red when over budget, tasks done/pending, team, deadline) and 3 charts (task completion, team workload, task timeline).
- Tabs: **Tasks**, **Milestones** (click the circle to mark done or reopen), **Team**, **Files**, **Activity**.

What you can do

- **Edit**, **Add Member** (employees not yet on the team), **Add Task** (project pre-selected), **Upload File**.
- Upload File: choose a file and category (Project Documents, Contracts, Invoices, Other). Types: pdf, doc/docx, xls/xlsx, ppt/pptx, png, jpg, svg, fig, zip, txt, csv. Maximum 10 MB; empty files are rejected.
- Team tab: contributors have a remove button (asks to confirm; their tasks stay assigned).
- Everything you add or remove is logged in the Activity tab.

Tasks

Purpose: The work items of all projects, as a board or a list.

What you see

- **Board:** columns Todo, In Progress, Review, Completed. Cards show priority, project, due date (red Overdue), comment/attachment counts, assignee.
- **List** (8 per page): Task, Project, Assignee, Priority, Status, Due Date.

What you can do

- Search; filter by Project, Assignee, Priority (Low, Medium, High, Urgent) and Status.
- **New Task:** Title* (3+ characters), Project*, Assignee*, Priority, Status, Due Date*, Description.
- Board: **drag** a card to another column, use the card's move menu, or focus a card and press Alt+Left / Alt+Right. Click a card to open the drawer.
- List: row actions View/Edit/Delete; bulk **Change status**, **Assign to**, **Delete**.
- **Task drawer:** change Status, Assignee and Priority inline (logged in history); edit; **checklist** with progress bar; attachments (same types and 10 MB limit); comments (up to 1000 characters); activity history.

Milestones

Purpose: Track delivery milestones grouped by project.

What you see

- Badge 'N overdue milestones' (red) or 'Nothing overdue' (green); tabs All, Upcoming, In progress, Done, Delayed; a card per project with a progress ring; overdue rows in red with 'N days overdue'.

What you can do

- Search; **click the circle** to mark Done or reopen.
- **Add milestone:** Title* (4+ characters), Project*, Owner*, Due date*, Status (Upcoming, In progress, Done, Delayed), Description. There is no edit or delete for milestones.

TIP: Tables show 5-8 rows per page with pagination. Delete always asks to confirm. Success and error messages appear as small pop-up toasts. Phone numbers need 10-13 digits (e.g. +91 98765 43210).

5.5 People: employees, departments, attendance, leave

Employees and Employee profile

Purpose: List, search and manage staff, and open one person's full profile.

What you see

- Table (8 per page): Employee (avatar, name, code), Department, Designation, Email, Phone, Projects, Status (Active / On Leave / Inactive). Sortable columns. Header: 'N team members across M departments'.

What you can do

- Search (name, email, phone, designation); filter by Department and Status.
- Row actions: **View profile**, **Edit**, **Delete** (permanent, asks to confirm). Tick rows for **Delete selected**.
- Add / Edit Employee:** Full Name* (3+ characters), Work Email* (valid and unique), Phone* (Indian mobile, e.g. +91 98765 43210), Designation*, Joining Date*; optional Department, Employment Type (Full-time, Part-time, Contract, Probation), Status, Skills (comma separated). A code TN-00xx is generated.
- Profile page:** header stats (Projects, Open tasks, Attendance % this month, Tenure) and tabs **Overview** (personal, professional info, skills), **Projects**, **Tasks**, **Attendance** (month counts and last 10 records), **Leave** (balance rings and history), **Documents**, **Activity** timeline.
- Attendance % = (Present + Late + WFH) divided by the month's records.

How to: add an employee

- Click **Add Employee**.
- Fill the required fields and click **Add Employee**.
- The person appears in the list with an auto-generated code.

Departments

Purpose: An overview of teams with headcount, active projects and utilisation.

What you see

- Four cards: Departments, Total headcount, Active projects, Average utilisation. A card per department with name, description, **head**, headcount, active projects and a utilisation bar (green under 75%, amber from 75%, red from 90%). Departments without members are hidden.

What you can do

- Search by department, head or description. Click a card for a drawer with description, stats, active projects and members.
- Add department:** name* (2+ characters, unique), head (optional), description (max 200 characters). In this version a new department exists only until the page is refreshed. There is no edit or delete.

Good to know

- Utilisation is an estimate based on the number of projects per employee, averaged over active employees.

Attendance

Purpose: Review daily attendance with a monthly calendar and a detailed log.

What you see

- Four cards: Present, Absent, Late, Work from Home (for the filtered records). Filters: Department, Employee, Date, Status.

- **Month calendar** (Monday first) with headcount dots per status; weekends and holidays are marked, future days are disabled. Click a day to filter the log to it.
- **Attendance log:** Employee, Department, Date, Status, Check-in, Check-out, Work hours.

What you can do

- **Export CSV** of the filtered rows (blocked with a warning if there are none). **Clear all filters.**
- This page is view-and-export only; attendance is not edited here.

Leave

Purpose: Review, approve or reject leave requests and raise requests for employees.

What you see

- Cards: Pending, Approved, Rejected. Status chips, search (employee or reason) and a leave-type filter (Casual, Sick, Earned). Pending requests are always listed first.

What you can do

- **Eye icon** opens a drawer with details, the balance ring for that leave type, a timeline and Approve / Reject (pending only).
- **Approve** takes effect immediately. **Reject** opens a form where a reason (5+ characters) is required.
- **New Leave Request:** Employee*, Leave Type, From*, To* (not before From), Reason* (5+ characters). The employee's three balance cards update live and a warning appears if the request exceeds the balance.

Good to know

- Yearly entitlement: **Casual 12, Sick 10, Earned 18** days. Days = calendar days, weekends included.
- Remaining = entitlement - approved - pending (never below 0).
- A request is refused if it overlaps an existing pending or approved request, or asks for more days than remain. Flow: Pending, then Approved or Rejected; there is no undo.

5.6 Finance: quotations, invoices, payments, expenses

Quotations

Purpose: Create quotations for prospects and track them until they become invoices.

What you see

- Cards: Total Quoted, Awaiting Response, Accepted/Converted value, Win Rate. Status chips: Draft, Sent, Accepted, Rejected, Expired, Converted. Table: number, client, amount, status (with a link to the invoice once converted), issue date, valid until.

What you can do

- Row and drawer actions by status: **Draft** - Send; **Sent** - Mark accepted, Mark rejected; **Accepted or Sent** - Convert to invoice.
- **New Quotation:** Client*, Valid until* (not in the past, default +15 days), line items (description, quantity above 0, price above 0 - at least one complete line), Tax/GST % (default 18, 0-100), Notes. Live Subtotal, GST and Total. Buttons **Save as Draft** or **Create & Send**. Numbers look like QUO-2026-001.

How to: convert a quotation to an invoice

1. Open an Accepted or Sent quotation and click **Convert**; confirm **Create Invoice**.
2. A Draft invoice is created with the same items, tax and notes (Net 15, due in 15 days).
3. The quotation becomes **Converted** and shows a link to the invoice.

Good to know

- $\text{Tax} = \text{subtotal} \times \text{tax\%} / 100$ (rounded). $\text{Total} = \text{subtotal} + \text{tax}$ (quotations have no discount).

Invoices and Invoice details

Purpose: Create, send and track invoices and record payments.

What you see

- Cards (cancelled excluded): Total Invoiced, Total Paid, Outstanding Balance, Overdue Invoices. Search, Client filter and status chips: Draft, Sent, Partially Paid, Paid, Overdue, Cancelled.
- Table: Invoice, Client, Date, Due date ('N days overdue'), Amount, Paid, Balance, Status.

What you can do

- Row actions (shown only when they apply): View, **Send** (Draft), **Record payment** (Sent / Partially Paid / Overdue), **Cancel** (asks to confirm).
- **Create Invoice** (split screen: form and live preview): Client*, Invoice number (auto, INV-2026-00001), Issue date*, Payment terms (Due on receipt, Net 7/15/30/45 - sets the due date), Due date* (not before issue), line items, Tax % (default 18), Discount in Rs. (not negative and not above subtotal + tax), Notes.
- Buttons: **Download PDF** (browser print dialog - choose Save as PDF), **Save as Draft**, **Create & Send**.
- **Invoice details:** status banner (due in N days / past due), Send Invoice, Send Reminder (shows a message only), **Record Payment**, **Mark as Paid** (records the full balance as a bank transfer), **Cancel Invoice** (only while nothing is paid; the balance is written off). Shows preview, payment history, summary card and activity timeline.

How to: record a payment

1. Open the invoice and click **Record Payment** (or use the Payments page).
2. Amount defaults to the balance - use **Pay full balance** or type less. The date cannot be in the future.
3. Choose the method (Bank Transfer, UPI, Credit Card, Debit Card, Cheque, Cash) and an optional reference; save.

4. The invoice becomes **Partially Paid**, or **Paid** when the balance reaches 0.

Good to know

- Total = subtotal + tax - discount (never below 0). The amount of a payment must be above 0 and cannot exceed the balance due. Cancelled is final.

Payments

Purpose: The ledger of money received against invoices.

What you see

- Cards: Total Collected, Pending, Overdue. Search (payment number, invoice, client), Method filter, status chips (Completed, Pending, Failed). Table newest first: Payment number, Invoice link, Client, Amount, Date, Method, Status.

What you can do

- **Record Payment** with an invoice picker limited to payable invoices; it creates a Completed payment and updates the invoice. There is no edit or delete of payments.

Expenses

Purpose: Log and analyse business expenses.

What you see

- Cards: Total Expenses, Monthly Expenses, Project Expenses, Top Category. Charts: monthly bars (6 months), category donut, spend by category, project expenses. Table (8 per page): Title (paperclip if a receipt exists), Category, Amount, Date, Employee, Project.

What you can do

- Filters: search, Category, Employee, Project (including 'No project'), Month; the total of the filtered rows is shown.
- Row actions View / Edit / Delete (permanent). Click a row for a drawer with the receipt.
- **Add / Edit Expense:** Title*, Category (Infrastructure, Software, Marketing, Travel, Client Entertainment, Team Building, Office Supplies, Other), Amount* (above 0, max 1,00,00,000), Date* (not in the future), Employee*, Project (optional), Description, Receipt (PDF, PNG or JPG up to 5 MB).

Good to know

- There is no approval workflow; expenses are saved directly.

5.7 Operations: documents, support, notifications

Documents

Purpose: A central library to upload, organise, preview and control access to documents.

What you see

- Search (name, project, client, uploader), sort by Date / Name / Size, Grid or List (10 per page). Category chips with counts: Client Documents, Project Documents, Employee Documents, Contracts, Invoices, Other.

What you can do

- **Preview, Download, Rename, Delete** (confirm) from the card menu or drawer.
- The **details drawer** lets you change **Access** (Everyone in workspace, Project team only, Admins only) and **Status** (Active, In review, Signed, Archived); changes save at once.
- **Rename rules:** not empty, no \ / : * ? " < > |, at most 120 characters, no duplicate names; you are warned if you change the extension.
- **Upload:** drag and drop or browse, several files at once. Types: PDF, DOC/DOCX, XLS/XLSX, CSV, PPT/PPTX, TXT, PNG, JPG, GIF, WEBP, FIG, ZIP. Maximum 10 MB per file; empty and duplicate files are rejected. Set Category*, Access (default Project team only), Project and Client. A progress bar is shown.

Good to know

- In this version 'Download' only shows a message; real file downloads are provided by the backend ([GET /documents/{id}/download](#)).

Support tickets (list and ticket details)

Purpose: Log, assign and answer client support requests.

What you see

- Search, Priority and Assignee filters, status chips with counts (Open, In Progress, Waiting for Client, Resolved, Closed). Table (8 per page): Ticket ID, Subject, Client, Assigned To, Priority (Low/Medium/High/Urgent), Status, Created.

What you can do

- **Export** the filtered tickets to CSV. Click a row to open the ticket.
- **Create Ticket:** Subject* (5+ characters), Client*, Category*, Priority (default Medium), Assign to*, Description* (15+ characters), optional attachment (pdf, doc, docx, xls,xlsx, png, jpg, txt, csv, zip, fig; 10 MB). Status starts as Open, ID TCK-####.
- **Ticket details:** description, conversation, and a side panel with client, **Assigned to**, **Status** and **Priority** dropdowns (each change saves at once and is added to the activity timeline), attachments, activity. **Mark Resolved** in the header.
- **Reply box:** the **Internal note** switch - off sends the message to the client, on keeps it visible to the team only (dashed amber bubble). Enter sends, Shift+Enter adds a line, up to 5 files per message.

Good to know

- A reply on an Open ticket moves it to In Progress. A Closed ticket disables the reply box (change the status to reopen). The 'client is typing' answer is a demo simulation.

Notifications

Purpose: An inbox of alerts and the delivery preferences.

What you see

- Tabs: All, Tasks, Projects, Billing, CRM, Support, Meetings, System (with counts); read filter All / Unread / Read; newest first with an unread dot.

What you can do

- Click an item for a drawer (it becomes read); toggle read/unread; **Dismiss**; **Mark all as read**.
- **Preferences card**: In-app and Email switch per category, then **Save preferences**. Defaults: in-app on everywhere; e-mail on for Billing, Support and Meetings.

5.8 Reports, team and settings

Reports

Purpose: Analytics per area with a date range, a filter per tab and export.

What you see

- Tabs and what they show:

Tab	Key figures	Charts	Table (filter)
Revenue	Total revenue, average monthly, growth vs previous period, clients billed	Monthly (area), yearly (bar), revenue by client	Client revenue: share, outstanding, projects (Client)
Projects	Total, active, average completion, delayed	Status donut, completion by project, delayed milestones	Project health: progress, budget, spent, health (Status)
Employees	Employees, tasks completed, average attendance, open tasks	Workload, tasks completed, attendance rate	Performance per employee (Department)
CRM	New leads, deals won, conversion, open pipeline value	Conversion funnel, lead source, pipeline value	Lead pipeline (Lead source)
Billing	Invoiced, paid, outstanding, overdue	Collections vs outstanding, invoices by status, collection progress	Invoices (Invoice status)
Support	Open now, opened, resolved, average resolution time	Open vs resolved, priority donut, resolution time	Tickets in period (Priority)

Reports - using them

Purpose: Choose the period, filter, then export.

What you can do

- **Date range:** This Month (default), Last Month, This Quarter, This Year (from 1 April), or **Custom Range** (From must not be after To). **Reset** returns to This Month with no filter.
- Tables show 6 rows per page and sort by column. Changing the range or filter reloads the report.
- **Export menu:** **Download CSV** exports exactly the rows shown (file name includes the report and range; Projects and Employees say 'snapshot'). 'Export as PDF' only shows a message in this version. Export is disabled while loading, on error or with no data.

Team & Roles

Purpose: Manage members, roles, permissions and invitations.

What you can do

- **Team Members tab:** search, Role and Status filters; table with Member, Email, Role, Department, Status (Active / On Leave / Deactivated), Last active. Change a role from the dropdown (applies at once). **Deactivate** (confirm; tasks and history are kept) and **Reactivate**.
- You cannot change or deactivate yourself or a Super Admin, and Super Admin cannot be given to anyone else.
- **Roles tab:** a card per role (Super Admin, Company Admin, Manager, Employee) with description, member count and permission counts; **View members** and **View permissions**.
- **Permissions tab:** a role-by-permission matrix grouped Projects, CRM, People, Finance, Reports, Administration. Click a cell to cycle Yes / Limited / No (Yes/No only for on-off permissions); the Super Admin column is locked. Changed cells are highlighted; use **Save changes**, **Discard** or **Reset to defaults**.
- **Invitations tab:** email, inviter, sent/expiry dates (7 days), role, Pending/Expired badge; **Resend** and **Revoke** (confirm).

- **Invite Member:** Email* (valid, not already a member or invited), Role (default Employee; Super Admin not offered), personal message (max 300 characters).

Settings

Purpose: Company, personal, security and preference settings.

What you can do

- **General:** Company name*, Industry, Business email*, Phone* (10-13 digits), Website (http/https URL), GSTIN (15 characters, upper case), Business address*; logo upload (PNG, JPG, SVG or WebP up to 2 MB); Timezone, Currency, Financial year start (April or January). A save bar appears with **Discard** and **Save changes**.
- **Profile:** Full name*, Designation, Email*, Phone, Location, Bio (max 240 characters).
- **Security:** *Change password* (current, new with strength meter, confirm; at least 8 characters and 3 of 4 rules; must differ from the current one); *Two-factor authentication* switch (preview only); *Active sessions* with **Sign out** per device and **Sign out all others** (each asks to confirm).
- **Notifications:** In-app and Email switches per category with master switches, e-mail frequency (Instant, Daily digest, Weekly digest).
- **Appearance:** Light, Dark or System theme, applied at once and remembered.
- **Roles:** a read-only summary with a button that opens the Permissions matrix.

6. Employee panel (employees and managers)

Opens at `/employee/dashboard` (sidebar badge 'Employee Dashboard'). Everything is scoped to **you**: your tasks, the projects you belong to, meetings you attend. Sidebar: Dashboard | Work (My Projects, My Tasks, Calendar, Meetings) | HR (Attendance, Leave, Documents) | Activity, Notifications, Profile, Settings.

Dashboard

Purpose: Your day at a glance.

What you see

- Greeting banner ('N due today', 'N upcoming meetings', **Open My Tasks**). Cards: Today's Tasks, Overdue Tasks, Active Projects, Leave Days Left.
- Lists: Today's Tasks, **Attendance clock**, Overdue Tasks, Upcoming Meetings (next 4), Leave Balance rings, Active Projects with progress, Recent Activity.

What you can do

- **Mark done** on a task due today. **View all** / **Apply** links go to Tasks or Leave.

How to: record your attendance

1. Click **Check In** on the clock card - the time is shown and the timer starts.
2. Click **Check Out** at the end of the day - hours worked are shown.
3. The button then reads **Done for today**.

My Projects

Purpose: The projects you work on (read-only).

What you see

- Cards with name, client, status, description, progress, team avatars, deadline and 'N open tasks assigned to you'.

What you can do

- Search (project or client) and filter by status (Active, Planning, On Hold, Completed); filter chips with **Clear filters**.
- Click a card for a drawer: dates, description, team (manager marked), milestone stepper and your tasks in that project. **View My Tasks** opens the task page.

My Tasks

Purpose: Your tasks as a Kanban board or list.

What you see

- **Board** (default) with columns Todo, In Progress, In Review, Done, or **List**. Overdue dates are red; list columns sort.

What you can do

- Search; filter by Priority, Project and Status; **Export CSV** (my-tasks.csv).
- Change status by **dragging** a card, by focusing a card and pressing **Alt + Arrow keys**, or with the status dropdown in List view. A toast confirms.
- Click a task for the drawer: status, description, **checklist** with progress, and tabs **Comments** (post a comment; empty is refused), **Attachments** (**Attach file**), **Activity**.

Calendar

Purpose: A month view of meetings, task deadlines, leave and holidays.

What you can do

- Previous / next month and **Today**; click a day for its details; **Apply for Leave** shortcut. The calendar is read-only.

Meetings

Purpose: Meetings you attend (read-only).

What you can do

- Tabs Upcoming, Completed, All; search and filter by type (Video Call, Phone Call, In Person). Cards show date, time, agenda, participants ('You') and a 'Today / Tomorrow / In N days' tag.
- **Join** opens the video link in a new tab (upcoming video calls only); **Open Calendar**. Employees cannot schedule meetings here.

Attendance

Purpose: Your monthly attendance.

What you see

- Cards for the month: Present, Absent, Late, Work From Home; a coloured month calendar; a **Today** clock panel with Check In / Check Out; a legend.

What you can do

- History table (8 per page): Date, Day, Check In, Check Out, Hours, Status - filter by status (Present, Work from Home, Late, Absent, On Leave) and sort.
- **Request regularisation** only shows an information message in this version. Check-ins are kept in memory and reset on refresh.

Leave

Purpose: See your balance, apply for leave and withdraw pending requests.

What you see

- Balance cards: **Casual 12, Sick 10, Earned 18** days a year, each with remaining, used and pending. History table: Type, From, To, Days, Reason (with the manager's note if rejected), Status.

What you can do

- Filter history by Pending, Approved, Rejected. **Withdraw** a pending request (asks to confirm).

How to: apply for leave

1. Click **Apply for Leave**.
2. Pick the Leave type (available days are shown).
3. Set From and To. A note shows how many **working days** will be deducted (weekends and holidays are excluded).
4. Enter a Reason (10+ characters) and click **Submit Request**. It goes to your manager as Pending.

Good to know

- The start date cannot be in the past (Sick Leave may be back-dated); the end must not be before the start; the range cannot be only weekends/holidays.
- Working days cannot exceed the remaining balance and the range cannot overlap another pending or approved request. Pending days already count against the balance.
- Note: this panel counts working days, while the admin leave page counts calendar days - a known difference in the current sample data.

Documents

Purpose: Your HR documents, files you uploaded and shared project files.

What you see

- Table: Document, Category, Project, Uploaded By, Date, Size; search, category filter, sortable columns.

What you can do

- **Preview** (eye icon) and **Download** per row.

How to: upload a document

1. Click **Upload Document**.
2. Drag a file in or click to browse.
3. Choose a Category* (and optionally a Project and a Note).
4. Click **Upload**.

Good to know

- Allowed: pdf, doc, docx, xls, xlsx, csv, ppt, pptx, png, jpg, jpeg, txt, zip, fig. Maximum 10 MB; empty files are rejected. In this version only the file details are kept (in memory).

Activity, Notifications

Purpose: Your history and your alerts.

What you can do

- **My Activity:** cards Tasks Completed, Meetings Attended, Hours Logged; chips All, Tasks, Comments, Meetings, Files, HR; grouped by day for 30 days (read-only).
- **Notifications:** **Mark all as read**, tabs All / Unread, search, type filter; click an item to mark it read, trash icon to dismiss.

Profile and Settings

Purpose: Maintain your own details and account.

What you can do

- **Profile:** avatar upload and skills (Enter or Add; max 12, no duplicates). Editable: Full name* (3+), Email*, Phone*, Date of birth, Gender, Address, Emergency contact name/phone, Work location (Pune HQ, Hybrid, Remote), About me (max 240). Read-only (managed by HR): designation, department, manager, employment type, joining date. Click **Save changes**.
- **Change password:** current, new, confirm (8+ characters with an upper-case letter and a number, different from the current one).
- **Settings** (shared page): tabs **Profile** (summary + Edit profile), **Security** (change password with strength meter, two-factor preview, active sessions with Sign out / Sign out all others), **Notifications** (In-app and E-mail per category, then Save preferences), **Appearance** (Light, Dark, System).

TIP: Managers use this same panel for their own work. Their extra powers (approving leave, managing projects and tasks, reports) are available in the backend API and in the admin screens, which a manager can open by address.

7. Client portal

For customers of the company. Opens at `/client/dashboard` (sidebar badge 'Client Dashboard'). Data is limited to **your own company**; internal budgets, spending and internal ticket notes are never shown. If your user is not linked to a client record, Dashboard and Profile show 'No company profile linked'. Sidebar: Dashboard | Workspace (Projects, Tasks, Documents, Meetings, Messages) | Billing (Invoices, Payments) | Support (Tickets) | Notifications, Profile, Settings.

Dashboard

Purpose: Everything about your account with the company.

What you see

- Welcome banner with pending and paid amounts and a **New Support Ticket** button. Six cards: Active Projects, Completed Projects, Pending Invoices, Paid Invoices, Open Tickets, Upcoming Meetings.
- Panels: Project Progress, Upcoming Meetings, Pending Invoices (overdue highlighted), Open Tickets, Recent Updates - click a project or ticket to open it.

Projects and Project details

Purpose: Follow the progress of your projects.

What you can do

- Cards (name, manager, status, progress, team, deadline); search by name or manager and filter by status.
- **Project details:** status, 'N / N milestones completed', target delivery date and progress bar. Tabs **Overview**, **Milestones**, **Tasks** (read-only, overdue in red), **Files** (Preview / Download), **Team**, **Activity**. **Message <manager>** opens Messages.

Tasks

Purpose: A read-only view of the work being delivered.

What you can do

- Cards: Total, In Progress, In Review, Completed; search, project filter, status tabs. Tasks are grouped by project and sorted by due date with an Overdue badge. Clients cannot create or edit tasks.

Documents

Purpose: Files shared with your company.

What you can do

- Table: File name, Category, Project, Uploaded, Uploaded by, Size; search, Category and Project filters; **Preview** and **Download**.

How to: share a file with the team

1. Click **Upload Document** and choose a file.
2. Choose a Category (Project Documents, Client Documents, Contracts, Other), optionally a Project and a Note.
3. Click **Upload**. Same file rules as employees (10 MB, common office/image/zip types).

Invoices

Purpose: See what you owe and pay it.

What you see

- Cards: Total Billed, Paid, Outstanding, Overdue. Table: Invoice, Issued, Due date, Amount, Balance, Status, Payment (Unpaid / Partially Paid / Paid). Search by number; filter by Sent, Partially Paid, Paid, Overdue.

What you can do

- **View** an on-screen invoice (bill-to, line items, subtotal, GST, discount, total, paid, balance due, notes, terms) with **Download** and **Pay Now**.
- **Download** saves an HTML file - open it and use Print to make a PDF. **Download statement** saves `account-statement.csv`. **Payment history** links to Payments.

How to: pay an invoice (demo checkout)

1. Click **Pay Now** on a row or inside the invoice preview.
2. Choose UPI, Card or Net Banking.
3. Fill the fields - UPI ID like `name@bank`; Card: number (13-19 digits), name, expiry MM/YY (not expired), CVV (3-4 digits); Net Banking: choose a bank.
4. Click **Pay Rs <balance> (Demo)**. After a moment a success screen shows a demo reference, the balance is settled and a payment record is added.

Good to know

- This is a demonstration - never enter real card details. Only the full outstanding balance can be paid.

Payments

Purpose: Your payment history.

What you can do

- Cards: Total Paid, Awaiting Verification, Outstanding Balance. Table: Payment number, Invoice link, Amount, Date, Method, Reference, Status (Completed / Pending / Failed).
- Search and status filter; **Receipt** (.txt) for completed payments; **Export history** (`payment-history.csv`).

Tickets and Ticket details

Purpose: Ask for help and follow the answer.

What you can do

- Table: Ticket, Subject, Category, Priority, Status, Created (sortable); search and status filter (Open, In Progress, Waiting for You, Resolved, Closed).

How to: raise a support ticket

1. Click **New Ticket** (or **New Support Ticket** on the dashboard).
2. Subject* (5+ characters), Category*, Priority (default Medium), Related project (optional), Description* (20+ characters), one optional attachment (max 5 MB).
3. Click **Submit Ticket**. You get an ID such as TCK-xxxx and land on the ticket, status Open.

How to: reply on a ticket

1. Open the ticket and type in the box; press **Send** (or Ctrl/Cmd + Enter). A reply on a 'Waiting for You' ticket moves it back to In Progress.
2. Use **Mark as resolved** when done, or **Reopen ticket** if it is resolved or closed.

Good to know

- A closed ticket cannot receive messages until reopened. The support 'typing' reply that appears a few seconds later is a demo simulation. A ticket of another company shows 'Ticket not found'.

Meetings, Messages, Notifications

Purpose: Stay in touch with the team.

What you can do

- **Meetings** (read-only): tabs Upcoming, Past, All; search and type filter; **Join Meeting** and **Copy link** for upcoming video calls.
- **Messages:** a chat per project with the project manager. Enter sends, Shift+Enter adds a line. Replies in this version are simulated and messages are not kept after refresh.
- **Notifications:** same inbox as the employee panel, limited to your company.

Profile and Settings

Purpose: Your contact and billing details.

What you can do

- **Company card** (read-only): company, industry, city, client since. **Contact details:** Full name*, Designation, Email*, Phone*. **Billing details:** Billing email (invoices are sent here) and GSTIN (15 characters, e.g. 27AABCT1234F1Z5, upper-cased). Switches for Invoices and payments, Support tickets, Project updates, Meeting reminders. **Save changes;** change password card below.
- **Settings** is the same shared page as in the employee panel.

8. Features shared by every panel

Top bar

- **Search** (button or **Ctrl+K**): up to 8 results, Up/Down and Enter, Esc closes. What is searched depends on your role: **client** - own projects, tasks, invoices (not drafts) and tickets; **employee** - own projects and tasks; **manager / admins** - leads, clients, projects, employees, tasks, invoices, tickets.
- **Create +** (admin panel only): New Lead, Client, Project, Task, Invoice, Meeting, Ticket, Employee.
- **Help (?)** opens the FAQ (hidden on very small screens). **Messages icon** (client panel) shows an unread dot until you open Messages.
- **Bell**: unread dot, recent items, **Mark all as read**, **View all notifications**. **Theme toggle** (sun/moon): light or dark, remembered; on phones use Settings > Appearance (Light, Dark, System).
- **Avatar menu**: Profile, Settings, Appearance, Help & Support, **Log Out** (signs you out and returns to Login).

Sidebar

- Logo, panel badge, navigation, your user card. Desktop: **Collapse/Expand** to an icon rail with tooltips.
- Below 1024 px it is a drawer: open with the menu button; close with Esc, tap outside, the X, or by choosing a page. A 'Skip to main content' link helps keyboard users.

Common behaviours

- Tables page through rows (5-10 per page), sort when you click a column heading, and turn into cards on phones.
- Filter chips appear under filter bars with **Clear all**. Delete always asks for confirmation. Success and error messages are toasts (bottom right, 4 seconds).
- Pages show a loading skeleton, and an error message with **Retry** if loading fails.
- All screens are responsive from phone to desktop. Every panel has its own colour theme (teal, orchid, orange).

Sessions

- A login lasts **8 hours** (absolute, not idle time). When it ends you are taken to **Session Expired**. With the real backend a 401 that cannot be fixed by refreshing the token has the same effect.
- Testers can shorten it: in the browser console run `localStorage.setItem('wf360-session-ttl-ms', '15000')` before logging in.

IMPORTANT: Sample-data mode: Except for login, every screen currently works on demo data held in the browser. Changes you make (tasks, leave, tickets, payments, uploads) are lost when you refresh the page. The sample calendar treats 'today' as 26 September 2026.

9. Using the backend API

The backend is a REST API. Everything the screens can do is also available as an API call, which you can try without the web app in the built-in **Swagger** page.

Try it in Swagger (<http://localhost:8000/docs>)

1. Open **POST /api/v1/auth/login**, click **Try it out**, enter `{"email": "company@workflow360.local", "password": "Password@123"}` and **Execute**.
2. Copy the value of `data.access_token` from the response.
3. Click the green **Authorize** button at the top, paste the token, click **Authorize** and **Close**.
4. Now open any endpoint (for example **GET /api/v1/projects**), click **Try it out** and **Execute**.
5. When the token expires (30 minutes) call **POST /api/v1/auth/refresh** with the `refresh_token`, or simply log in again.

Alternatively import `backend/postman/WorkFlow360.postman_collection.json` into Postman, run **POST /auth/login** first (it saves the token automatically) and then any other request.

Every response has the same shape

Situation	Shape
Success	<code>{"success": true, "message": "Project created successfully", "data": {...}}</code>
List	same, plus <code>page, limit, total, total_pages</code>
Error	<code>{"success": false, "message": "...", "errors": {"field": "reason"}}</code>

HTTP code	Meaning
200 / 201	OK / created
400	Bad request (for example a super admin forgot <code>?company_id=</code>)
401	Not logged in, or the token is invalid or expired
403	Logged in, but your role is not allowed
404	Not found - or it belongs to another company
409	Conflict, for example a duplicate client or an invoice that cannot be edited
422	Validation failed - the <code>errors</code> field lists what is wrong
500	Unexpected server error (details are only in the server log)

Lists: paging, searching, sorting, filtering

- Paging: `?page=1&limit=20` (limit is at most 100).
- Search: `?search=tech`. Sorting: `?sort_by=created_at&sort_order=desc` (only allowed fields; anything else is rejected).
- Filters are per module, e.g. `/projects?status=active`, `/tasks?status=in_progress&priority=high`, `/invoices?status=overdue`, `/tickets?priority=urgent`, `/employees?department=development&status=active`.
- Super admin only: add `?company_id=2` to work inside one company (required when creating data).

Files (uploads and downloads)

- Uploads are sent as `multipart/form-data`. Allowed types: pdf, images, txt, csv, Word, Excel, PowerPoint, zip. The size limit is 10 MB (`MAX_UPLOAD_MB`).

- The file extension, declared type and the first bytes of the file are all checked; files are stored under a random name in `backend/uploads/`.
- Downloads always go through the API (`GET /documents/{id}/download`), which checks your permission first. The uploads folder is never public.

10. What each backend module does

These are the business rules the server enforces no matter which screen or tool sends the request.

Authentication

- **Register** creates a new company and its first company admin and signs them in. Employees and clients are added later by an admin.
- **Login** returns a 30-minute access token and a 7-day refresh token. **Refresh** swaps a refresh token for a new pair (the old one stops working). **Logout** revokes the refresh token.
- Passwords need 8+ characters with upper case, lower case and a number, and the confirm field must match. They are stored only as bcrypt hashes.
- **Forgot / reset password** and **email verification** use single-use tokens. There is no e-mail server yet, so the token is written to the backend log (and returned as `dev_token` in development).
- **Change password** needs the current password and signs out other devices. Suspended users and suspended companies are blocked immediately.

Users, roles, companies, audit log

- Admins create users, change a user's role, and set status **active / inactive / suspended**. DELETE only deactivates. You cannot change your own role or status, and the last active admin of a company cannot be removed.
- Only a super admin can create companies, suspend a company, and edit which permissions a role has.
- Company admins edit their company profile (name, address, GSTIN, currency, timezone, fiscal year) under `/companies/me`.
- Every create, update, delete, login, password change and status change is written to the **audit log**, which admins can read and filter but nobody can edit.

CRM: leads and clients

- Leads have a status (new, contacted, qualified, proposal, negotiation, won, lost), source, owner, estimated value and follow-up date, plus a timeline of calls, emails, meetings, notes and follow-ups.
- **Convert lead to client** creates the client and a primary contact, marks the lead won, adds a note and an audit entry - all in one step. A lead cannot be converted twice, a lost lead cannot be converted, and an existing client with the same name or email is never duplicated.
- Clients have several contacts (only one primary). Company name and email must be unique inside a company. Deleting a client that already has projects, invoices or tickets **archives** it instead so history is kept.

Projects, milestones, tasks

- Project codes are generated (PRJ-001...). The end date cannot be before the start date; budget cannot be negative.
- Project **progress is calculated** from its tasks (completed / total) and updates whenever a task changes.
- Members are added by the project's manager or an admin. A task can only be assigned to a project member. Removing a member unassigns their tasks in that project.
- Task status flow: todo, in progress, review, completed. Completing a task stamps the completion time. Tasks have priority, due date, checklist, comments and file attachments.
- Employees can change the status of their own tasks, tick the checklist, comment and attach files; only admins/managers can edit, assign or delete tasks.

Employees, departments, attendance, leave

- Creating an employee creates their login too. If you do not give a password a strong temporary one is generated and shown once.

- **Salary** is visible only to admins and to the employee on their own profile. Deactivating an employee (never a hard delete) also disables their login.
- **Attendance**: check-in after 10:00 is marked *late*; a second check-in or a check-out without check-in is refused. Admins can add or correct records.
- **Leave**: casual 12, sick 10, earned 18 days a year (calendar days, pending requests count against the balance). Overlapping requests are refused, you cannot approve your own leave, and an approval creates *on leave* attendance for the working days.

Finance: quotations, invoices, payments, expenses

- **The server always calculates the money.** Per line: quantity x unit price, minus the line discount, plus tax. The invoice adds an optional extra discount. Amounts are rounded to 2 decimals and totals sent by a client are rejected.
- Invoice numbers are INV-year-00001 style. Invoices start as draft, become *sent* when sent (the client is notified), then partially paid / paid. Unpaid invoices past their due date show as **overdue** automatically.
- An invoice can be edited only while draft (or sent with no payments) and deleted only while draft; otherwise cancel it.
- **Recording a payment** locks the invoice, refuses amounts above the balance, updates paid amount, balance and status, writes the audit log and notifies people - all in one transaction. Payments cannot be edited or deleted.
- A **quotation** can be sent, accepted or rejected, and converted (once) into a draft invoice. **Expenses** have categories, optional project/employee and a receipt attachment, with a summary by category and month.

Documents

- Visibility per document: **private** (uploader and admins), **company** (all staff), **client** (staff and users of that client). Employee documents (offer letters, KYC) are visible only to admins and that employee.
- Anyone without access gets 'not found'. Every download is recorded in the audit log; deleting a document removes the file too.

Support tickets

- Ticket numbers are TCK-0001 style. Clients raise tickets for their own client; staff choose the client.
- Status flow: open, in progress, waiting for client, resolved, closed. A **closed** ticket is read-only and only an admin/manager can reopen it. A client can close their own ticket or reopen a resolved one.
- Comments can be **internal** (staff only). Clients never see internal comments, their attachments or their count. A client reply on a *waiting for client* ticket reopens it automatically.
- Only admins/managers assign tickets, and only to active staff of the same company.

Meetings, notifications, dashboards, reports, search

- Meetings have a date, start/end time, type (client meeting, internal, project review, sales, support, other), link or location, participants and their responses (pending / accepted / declined). Participants are notified of invitations, changes and cancellations.
- Every user has personal **notifications** (mark one or all as read, delete, unread count).
- **Dashboards** are calculated on the server per role (admin, manager, employee, client): revenue this month vs last month, outstanding amount, active clients/projects, pending tasks, open tickets, sparklines and charts.
- **Reports**: revenue, projects, clients, employees, tasks, invoices (with ageing buckets), payments, tickets - with date, project, client and department filters and CSV download.
- **Global search** looks across clients, leads, projects, employees, tasks, invoices and tickets and returns only what your role may see.

11. Demo data in the database

Loaded by `python -m app.database.seed --reset` (run inside the `backend` folder). Dates are relative to the day you run it, so dashboards always look current.

Item	Amount	Notes
Companies	2	TechNova Solutions (full data) and Northwind Digital (tiny, to show that companies are isolated)
Users	15	Super admin, company admin, manager, 9 employees, 2 client users, 1 Northwind admin
Departments	9	Development, Design, HR, Sales, Finance, Support, Delivery, QA, Leadership
Clients	7 (+1)	BrightPixel Labs, CloudMatrix, InnoSoft, Meridian Retail, Zenith Financial, Coastal Hospitality, Nimbus Freight
Projects / milestones	8 / 24	Planning, active, on hold and completed
Tasks	32	All statuses and priorities, with comments
Invoices / payments	12 / 8	Draft, sent, partially paid, paid, overdue, cancelled - balances match the payments
Quotations, expenses	3 / 12	All expense categories
Leads	10	All pipeline stages, with call and email activities
Tickets	12	All statuses, with public and internal comments
Meetings, documents	8 / 8	Documents are real small PDFs in backend/uploads
Attendance, leave, holidays	~110 / 7 / 5	Last two weeks of attendance for every employee

IMPORTANT: `--reset` drops and recreates every table of the configured database (workflow360_db). Use it only on the demo/development database.

12. Testing, backup and troubleshooting

Run the automated tests

1. Make sure MySQL is running and a database named `workflow360_test` exists (create it once in phpMyAdmin, collation `utf8mb4_unicode_ci`).
2. In the `backend` folder run `python -m pytest`. It takes about 2-4 minutes and should end with **442 passed**.
3. To use another test database: `$env:TEST_DB_NAME='workflow360_test_2'` before running.

IMPORTANT: The tests wipe every table of the `*test*` database. The runner refuses to start if the database name does not contain the word 'test'.

Useful commands (run in the backend folder)

Goal	Command
Start the API	<code>uvicorn app.main:app --reload --port 8000</code>
Create tables + roles only	<code>python -m app.database.init_db</code>
Reload demo data (wipes workflow360_db)	<code>python -m app.database.seed --reset</code>
Rebuild <code>sql/schema.sql</code>	<code>python scripts/export_schema.py</code>
Rebuild endpoint list and Postman file	<code>python scripts/export_docs.py</code>
Run all tests	<code>python -m pytest</code>

Backing up your data

- Everything lives in the XAMPP folder `C:\xampp\mysql\data`. Stop MySQL in the XAMPP panel, then copy that folder to another drive.
- Uploaded files (documents, task and ticket attachments, expense receipts) are in `backend\uploads`. Back this folder up together with the database.
- A backup of the XAMPP data made during the crash repair is at `D:\xampp_mysql_data_BACKUP_2026-09-26`.

Troubleshooting

Problem	What to do
Backend says the JWT secret is not set	Copy <code>backend\.env.example</code> to <code>backend\.env</code> and set <code>JWT_SECRET_KEY</code> to a long random text.
Cannot connect to MySQL	Start MySQL in the XAMPP Control Panel and check <code>DB_HOST</code> , <code>DB_PORT</code> (3306) in <code>backend\.env</code> .
Unknown database 'workflow360_db'	Create it in phpMyAdmin, then run <code>python -m app.database.seed --reset</code> .
MySQL turns red / stops immediately	Look at the XAMPP log. If it mentions Aria recovery failed , the MySQL system logs are out of sync: back up <code>C:\xampp\mysql\data</code> , move (do not delete) <code>aria_log.*</code> and <code>aria_log_control</code> to another folder, then start MySQL again.
Browser shows a CORS error	Add the web app address to <code>FRONTEND_URL</code> in <code>backend\.env</code> (comma separated) and restart the backend.
Login says 'session expired'	The access token ran out and could not be refreshed. Log in again.
Tests will not start	The test database name must contain 'test'.
Data disappeared after a browser refresh	You are on the built-in sample data. Only the real backend keeps data permanently.

Known limits of this version

- Only login/register/password screens are wired to the real backend; other screens still show sample data.
- No e-mail sending, payment gateway, chat/WebSockets, background jobs or cloud storage yet.
- Payments cannot be refunded or reversed; quotation expiry is not enforced; leave balances count calendar days (holidays are not skipped).
- Users created with `POST /users` as employee/manager have no employee profile - create staff with `POST /employees` instead.

Appendix A. Complete endpoint reference

All **189** API endpoints, grouped by module. Base URL <http://localhost:8000/api/v1>. **Access** shows the permission code a role needs; 'signed in' means any logged-in user (the module then applies its own row-level rules). All endpoints except login, register, forgot/reset password and verify-email need a token.

Attendance (11)

Method	Path	What it does	Access
GET	/attendance	List attendance records	signed in
POST	/attendance	Create an attendance record manually	manage_attendance
POST	/attendance/check-in	Check in for today	mark_attendance
POST	/attendance/check-out	Check out for today	mark_attendance
GET	/attendance/me/summary	My monthly attendance counts	mark_attendance
GET	/attendance/today	Today's attendance summary	view_attendance
DELETE	/attendance/{record_id}	Delete an attendance record	manage_attendance
PUT	/attendance/{record_id}	Update an attendance record	manage_attendance
GET	/holidays	List holidays of a year	signed in
POST	/holidays	Add a holiday	manage_settings
DELETE	/holidays/{holiday_id}	Remove a holiday	manage_settings

Audit Logs (2)

Method	Path	What it does	Access
GET	/audit-logs	List audit log entries	view_audit_logs
GET	/audit-logs/{log_id}	Get one audit log entry	view_audit_logs

Auth (10)

Method	Path	What it does	Access
POST	/auth/change-password	Change the signed-in user's password	signed in
POST	/auth/forgot-password	Request a password reset link	public
POST	/auth/login	Sign in with email and password	public
POST	/auth/logout	Sign out (revokes the refresh token)	public
GET	/auth/me	Current user, company and permissions	signed in
POST	/auth/refresh	Exchange a refresh token for a new token pair	public
POST	/auth/register	Register a new company workspace	public
POST	/auth/resend-verification	Send a new email verification token	signed in
POST	/auth/reset-password	Set a new password using a reset token	public
POST	/auth/verify-email	Confirm an email address with the emailed token	public

Clients (12)

Method	Path	What it does	Access
GET	/clients	List clients	view_clients
POST	/clients	Create a client	create_clients
DELETE	/clients/{client_id}	Delete (or archive) a client	delete_clients
GET	/clients/{client_id}	Get a client with contacts and billing stats	signed in
PUT	/clients/{client_id}	Update a client	edit_clients
GET	/clients/{client_id}/contacts	List a client's contacts	view_clients
POST	/clients/{client_id}/contacts	Add a contact to a client	edit_clients
DELETE	/clients/{client_id}/contacts/{contact_id}	Remove a client contact	edit_clients
PUT	/clients/{client_id}/contacts/{contact_id}	Update a client contact	edit_clients
GET	/clients/{client_id}/invoices	List a client's invoices	view_invoices
GET	/clients/{client_id}/payments	List a client's payments	view_payments
GET	/clients/{client_id}/projects	List a client's projects	view_projects

Companies (7)

Method	Path	What it does	Access
GET	/companies	List companies (super admin)	manage_companies
POST	/companies	Create a company with its first admin (super admin)	manage_companies
GET	/companies/me	Get the caller's company settings	manage_settings
PUT	/companies/me	Update the caller's company settings	manage_settings
GET	/companies/{company_id}	Get a company (super admin)	manage_companies
PUT	/companies/{company_id}	Update a company (super admin)	manage_companies
PATCH	/companies/{company_id}/status	Activate or suspend a company (super admin)	manage_companies

Dashboard (7)

Method	Path	What it does	Access
GET	/dashboard/activities	Latest audit-trail entries	view_dashboard
GET	/dashboard/clients	Client counts by status, top clients by revenue and new clients per month (admin only)	view_dashboard
GET	/dashboard/overview	Role-aware KPI overview	view_dashboard
GET	/dashboard/projects	Project counts by status and the top open projects by progress	view_dashboard
GET	/dashboard/revenue	Monthly revenue, invoiced and outstanding (admin only)	view_dashboard
GET	/dashboard/tasks	Task counts by status/priority, overdue count and tasks due this week	view_dashboard
GET	/dashboard/tickets	Ticket counts, monthly opened-vs-resolved trend and average resolution time	view_dashboard

Departments (5)

Method	Path	What it does	Access
GET	/departments	List departments	view_departments
POST	/departments	Create a department	manage_departments
DELETE	/departments/{department_id}	Delete a department	manage_departments
GET	/departments/{department_id}	Get a department	view_departments
PUT	/departments/{department_id}	Update a department	manage_departments

Documents (8)

Method	Path	What it does	Access
GET	/clients/{client_id}/documents	List a client's documents	view_documents
GET	/documents	List documents	view_documents
POST	/documents/upload	Upload a document	upload_documents
DELETE	/documents/{document_id}	Delete a document and its stored file	delete_documents
GET	/documents/{document_id}	Get a document's details	view_documents
PATCH	/documents/{document_id}	Rename a document or change its category / visibility	upload_documents
GET	/documents/{document_id}/download	Download (or preview) a document	view_documents
GET	/projects/{project_id}/documents	List a project's documents	view_documents

Employees (9)

Method	Path	What it does	Access
GET	/employees	List employees	view_employees
POST	/employees	Create an employee (and their login)	create_employees
GET	/employees/me	The caller's own employee profile	signed in
DELETE	/employees/{employee_id}	Deactivate an employee	delete_employees
GET	/employees/{employee_id}	Get an employee profile	view_employees
PUT	/employees/{employee_id}	Update an employee	edit_employees
GET	/employees/{employee_id}/activity	Audit trail of an employee's actions	signed in
GET	/employees/{employee_id}/projects	List projects an employee manages or belongs to	view_projects
GET	/employees/{employee_id}/tasks	List tasks assigned to an employee	view_tasks

Expenses (8)

Method	Path	What it does	Access
GET	/expenses	List expenses	view_expenses
POST	/expenses	Record an expense	manage_expenses
GET	/expenses/summary	Expense totals by category and by month	view_expenses
DELETE	/expenses/{expense_id}	Delete an expense (and its attachment)	manage_expenses
GET	/expenses/{expense_id}	Get an expense	view_expenses
PUT	/expenses/{expense_id}	Update an expense	manage_expenses
GET	/expenses/{expense_id}/attachment	Download the receipt	view_expenses
POST	/expenses/{expense_id}/attachment	Upload (or replace) the receipt	manage_expenses

Invoices (9)

Method	Path	What it does	Access
GET	/invoices	List invoices	view_invoices
POST	/invoices	Create an invoice	create_invoices
DELETE	/invoices/{invoice_id}	Delete a draft invoice	delete_invoices
GET	/invoices/{invoice_id}	Get an invoice with items, payments and activity	view_invoices
PUT	/invoices/{invoice_id}	Edit an invoice	edit_invoices
POST	/invoices/{invoice_id}/cancel	Cancel an invoice	edit_invoices
GET	/invoices/{invoice_id}/items	List an invoice's line items	view_invoices
GET	/invoices/{invoice_id}/payments	List payments recorded against an invoice	view_invoices, view_payments
POST	/invoices/{invoice_id}/send	Send a draft invoice to the client	edit_invoices

Leads (9)

Method	Path	What it does	Access
GET	/leads	List leads	view_leads
POST	/leads	Create a lead	create_leads
GET	/leads/pipeline	Pipeline summary for the Kanban header	view_leads
DELETE	/leads/{lead_id}	Delete a lead	delete_leads
GET	/leads/{lead_id}	Get a lead	view_leads
PUT	/leads/{lead_id}	Update a lead	edit_leads
GET	/leads/{lead_id}/activities	List a lead's activities (newest first)	view_leads
POST	/leads/{lead_id}/activities	Log an activity on a lead	edit_leads
POST	/leads/{lead_id}/convert	Convert a lead into a client	edit_leads

Leave (6)

Method	Path	What it does	Access
GET	/leave	List leave requests	signed in
POST	/leave	Apply for leave	apply_leave
GET	/leave/balance	Leave balance	signed in
PATCH	/leave/{leave_id}/approve	Approve a leave request	approve_leave
PATCH	/leave/{leave_id}/cancel	Cancel own pending leave request	apply_leave
PATCH	/leave/{leave_id}/reject	Reject a leave request	approve_leave

Meetings (7)

Method	Path	What it does	Access
GET	/meetings	List meetings	view_meetings
POST	/meetings	Schedule a meeting	manage_meetings
DELETE	/meetings/{meeting_id}	Delete a meeting	manage_meetings
GET	/meetings/{meeting_id}	Get a meeting	view_meetings
PUT	/meetings/{meeting_id}	Update, reschedule or cancel a meeting	manage_meetings
POST	/meetings/{meeting_id}/participants	Add participants	manage_meetings
PATCH	/meetings/{meeting_id}/participants/{user_id}	Accept or decline a meeting	view_meetings

Milestones (3)

Method	Path	What it does	Access
DELETE	/milestones/{milestone_id}	Delete a milestone	edit_projects
GET	/milestones/{milestone_id}	Get a milestone	view_projects
PUT	/milestones/{milestone_id}	Update a milestone	edit_projects

Notifications (5)

Method	Path	What it does	Access
GET	/notifications	List my notifications	signed in
PATCH	/notifications/read-all	Mark all my notifications as read	signed in
GET	/notifications/unread-count	Number of my unread notifications	signed in
DELETE	/notifications/{notification_id}	Delete one of my notifications	signed in
PATCH	/notifications/{notification_id}/read	Mark one notification as read	signed in

Payments (3)

Method	Path	What it does	Access
GET	/payments	List payments	view_payments
POST	/payments	Record a payment against an invoice	create_payments
GET	/payments/{payment_id}	Get a payment	view_payments

Projects (12)

Method	Path	What it does	Access
GET	/projects	List projects	view_projects
POST	/projects	Create a project	create_projects
DELETE	/projects/{project_id}	Delete a project	delete_projects
GET	/projects/{project_id}	Get a project	view_projects
PUT	/projects/{project_id}	Update a project	edit_projects
GET	/projects/{project_id}/activity	Project activity feed	view_projects
GET	/projects/{project_id}/members	List project members	view_projects
POST	/projects/{project_id}/members	Add a project member	manage_project_members
DELETE	/projects/{project_id}/members/{employee_id}	Remove a project member	manage_project_members
GET	/projects/{project_id}/milestones	List a project's milestones	view_projects
POST	/projects/{project_id}/milestones	Add a milestone to a project	edit_projects
GET	/projects/{project_id}/tasks	List a project's tasks	view_tasks

Quotations (9)

Method	Path	What it does	Access
GET	/quotations	List quotations	view_quotations
POST	/quotations	Create a quotation	manage_quotations
DELETE	/quotations/{quotation_id}	Delete a draft quotation	manage_quotations
GET	/quotations/{quotation_id}	Get a quotation with its items	view_quotations
PUT	/quotations/{quotation_id}	Edit a quotation	manage_quotations
POST	/quotations/{quotation_id}/accept	Record that the client accepted (sent -> accepted)	manage_quotations
POST	/quotations/{quotation_id}/convert	Convert a quotation into a draft invoice	manage_quotations
POST	/quotations/{quotation_id}/reject	Record that the client rejected (sent -> rejected)	manage_quotations
POST	/quotations/{quotation_id}/send	Mark a draft quotation as sent	manage_quotations

Reports (8)

Method	Path	What it does	Access
GET	/reports/clients	Client billing report (admin only)	view_reports
GET	/reports/employees	Employee performance report (admin; manager: members of visible projects)	view_reports
GET	/reports/invoices	Invoice report with aging (admin only)	view_reports
GET	/reports/payments	Payment report (admin only)	view_reports
GET	/reports/projects	Project completion report (admin; manager: visible projects)	view_reports
GET	/reports/revenue	Revenue report (admin only)	view_reports
GET	/reports/tasks	Task report (admin; manager: visible projects)	view_reports
GET	/reports/tickets	Support ticket report (admin; manager: visible projects)	view_reports

Roles & Permissions (4)

Method	Path	What it does	Access
GET	/permissions	List all permissions grouped by module	view_roles
GET	/roles	List roles	view_roles
GET	/roles/{role_id}	Get a role with its permission codes	view_roles
PUT	/roles/{role_id}/permissions	Replace the permissions of a role (super admin only)	manage_roles

Search (1)

Method	Path	What it does	Access
GET	/search	Global search across modules	signed in

Tasks (14)

Method	Path	What it does	Access
GET	/tasks	List tasks	view_tasks
POST	/tasks	Create a task	create_tasks
DELETE	/tasks/{task_id}	Delete a task (admin / manager)	delete_tasks
GET	/tasks/{task_id}	Get a task	view_tasks
PUT	/tasks/{task_id}	Update a task (admin / manager)	edit_tasks
PATCH	/tasks/{task_id}/assign	Assign or unassign a task (admin / manager)	edit_tasks
GET	/tasks/{task_id}/attachments	List a task's attachments	view_tasks
POST	/tasks/{task_id}/attachments	Attach a file to a task	edit_tasks
DELETE	/tasks/{task_id}/attachments/{attachment_id}	Delete a task attachment	edit_tasks
GET	/tasks/{task_id}/attachments/{attachment_id}/download	Download a task attachment	view_tasks
PATCH	/tasks/{task_id}/checklist	Replace a task's checklist	edit_tasks
GET	/tasks/{task_id}/comments	List a task's comments	view_tasks
POST	/tasks/{task_id}/comments	Comment on a task	edit_tasks
PATCH	/tasks/{task_id}/status	Change a task's status	edit_tasks

Tickets (14)

Method	Path	What it does	Access
GET	/clients/{client_id}/tickets	List a client's tickets	view_tickets
GET	/tickets	List tickets	view_tickets
POST	/tickets	Raise a ticket	create_tickets
DELETE	/tickets/{ticket_id}	Delete a ticket	manage_tickets
GET	/tickets/{ticket_id}	Get a ticket with comments and attachments	view_tickets
PUT	/tickets/{ticket_id}	Edit a ticket	view_tickets
PATCH	/tickets/{ticket_id}/assign	Assign a ticket to an internal user	manage_tickets
GET	/tickets/{ticket_id}/attachments	List a ticket's attachments	view_tickets
POST	/tickets/{ticket_id}/attachments	Attach a file to a ticket (or to one of its comments)	view_tickets
DELETE	/tickets/{ticket_id}/attachments/{attachment_id}	Remove a ticket attachment	view_tickets
GET	/tickets/{ticket_id}/attachments/{attachment_id}/download	Download a ticket attachment	view_tickets
GET	/tickets/{ticket_id}/comments	List a ticket's comments	view_tickets
POST	/tickets/{ticket_id}/comments	Comment on a ticket	view_tickets
PATCH	/tickets/{ticket_id}/status	Change a ticket's status	view_tickets

Users (6)

Method	Path	What it does	Access
GET	/users	List users	view_users
POST	/users	Create a user	create_users
DELETE	/users/{user_id}	Deactivate a user	delete_users
GET	/users/{user_id}	Get a user	view_users
PUT	/users/{user_id}	Update a user	edit_users
PATCH	/users/{user_id}/status	Activate, deactivate or suspend a user	edit_users
